eWallet User Guide

Make a passive income using
eWallets online.

A Guide to eWallets

eWallets are quickly becoming one of the most popular ways to pay securely at various sites including e-commerce sites and online sportsbooks, trading or casino sites. They offer many advantages including versatility, VIP incentives and loyalty or cashback schemes. In this guide, we are going to look at what eWallets are in more detail, compare some of the best options out there and discuss how you can get yourself set up to make money while using them.

We'll take you through step-by-step rules, key terms and usability instructions to ensure you don't miss out on anything important. We'll also explain (in detail) exactly how you can gain VIP status with your eWallet account, without having to reach the minimum requirements set out by these companies to start earning incentives and rewards right away.

Hopefully, this guide will encourage you to sign up to one of the top eWallet providers out there right now and start making a passive income while you spend at multiple retailers and merchants online.

Find out more about this secure payment technology below in our detailed user guide.

What is an eWallet?

In simple terms, an eWallet is a prepaid account online that you can use to perform financial transactions safely and securely. Many people use eWallets to store money away from their regular bank account and have easy access to it when they need it for an online purchase.

Over the years, the variety of eWallets on offer has increased drastically. New companies are hoping to cash in on this kind of service as they recognise just how valuable it can be. Of course, there are some providers who are leading the market right now including Skrill, Neteller and ecoPayz.

eWallet transactions are usually made by a computer or a smartphone with the latter becoming one of the most popular ways to pay online in general. Each eWallet offers different benefits with some providers offering more incentives than others. It is often down to the individual user to decide which eWallet meets their requirements based on fees, rewards and places that they will be able use it.

We make this process a lot simpler as we've done the hard work for you and can help you navigate which eWallet will give you the best return and incentive based on your preferred spending habits online.

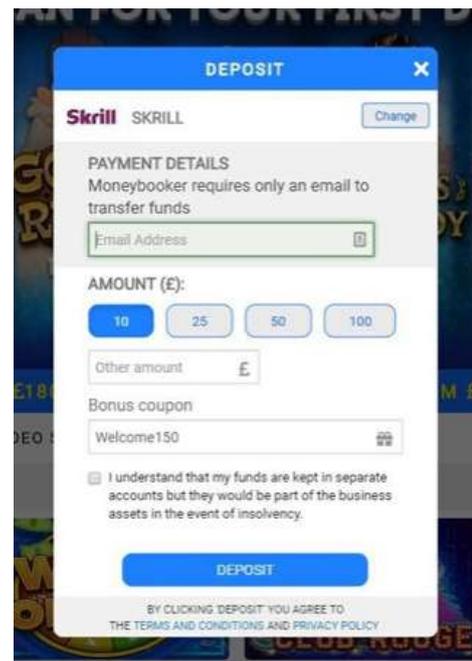

How does it work?

An eWallet is usually made up of software that stores the data and financial information of the user. This software is heavily encrypted to ensure that no data gets into the wrong hands. It is the responsibility of the user to find out more about the security of each eWallet that they use. Of course, Neteller, Skrill and ecoPayz all offer high levels of encryption so you won't need to worry about those.

eWallet software will store information that is needed to make a purchase. This can include everything from the credit and debit card details to the name of the user and their shipping address. With this information, securely encrypted they can ensure that everything goes smoothly when you pay or play at retailers online. It also means you don't have to insert your banking or financial information on multiple websites each time you want to purchase online.

These eWallets work in a very simple way that makes online payments much quicker than with traditional banking methods. Once the user has installed the software for their eWallet of choice onto their device and signed up, the rest is simple. Typically, sites that accept eWallets will ask for a username and password attached to the account. There are some differences between the way that various providers such as Skrill or Neteller might ask you to deposit.

You might be presented with something like this when trying to use your Skrill eWallet. As you can see, this is a simple deposit process and this is similar to what you would find if you made a deposit at an online casino. eWallets are not difficult to understand at all and once you give them a try, you'll be sure to be using them all of the time.

The image shows a mobile application interface for depositing funds into a Skrill account. The screen is titled "DEPOSIT" and features the Skrill logo. The "PAYMENT DETAILS" section indicates that Moneybooker requires an email address for fund transfers, with a corresponding input field. The "AMOUNT (£)" section offers preset options of 10, 25, 50, and 100, along with a field for "Other amount". A "Bonus coupon" field contains the code "Welcome150". A checkbox at the bottom states, "I understand that my funds are kept in separate accounts but they would be part of the business assets in the event of insolvency." A large blue "DEPOSIT" button is positioned at the bottom of the form. A disclaimer at the very bottom reads, "BY CLICKING 'DEPOSIT' YOU AGREE TO THE TERMS AND CONDITIONS AND PRIVACY POLICY."

What do they offer?

eWallets like Neteller offer a wide variety of benefits. The most obvious is an easy payment system for those who are sick of having to enter their credit and debit card details every time they want to make an online payment. The service that they offer is fast, effective and usually comes with low fees in comparison to other methods of online payment out there.

It is also worth noting that many eWallet providers like Skrill and ecoPayz offer VIP schemes and cash back incentives for their users. We'll talk about these in a little more detail later in our guide. With so much on offer, many people are making the switch eWallets sooner rather than later.

Why Use eWallets?

The list of reasons to use eWallets is quite long and if you aren't already using one of these methods on a regular basis then you could be missing out. To make things a little simpler, we thought we would outline some of the advantages of using eWallet methods such as Skrill, Neteller and ecoPayz below.

Doing so gives you the opportunity to show how your social media program has been improving over time, as well as how these activities are adding value to the organization.

Advantages of eWallets

Here are 4 main advantages for using wallets

1

You won't be carrying around cash that you could lose and your account is much harder to hack as it will be password protected. It is vital that we are looking after our money and eWallets can help with the added level of security.

2

In the past, you might have only been able to use your eWallet at certain sites but now you can deposit at online casinos, pay for your groceries transfer money to family or travel abroad. All of these actions earn you loyalty rewards.

3

While some credit and debit card providers offer VIP reward incentives, when you use an eWallet, you can get real Cash rewards

4

You should also know that many eWallets offer tools to help you track your online spending. You can see what you have spent, where you have spent it and when. This is helping people to regain control of their money and finances.

"Safe, secure, instant rewards."

Where can you use them?

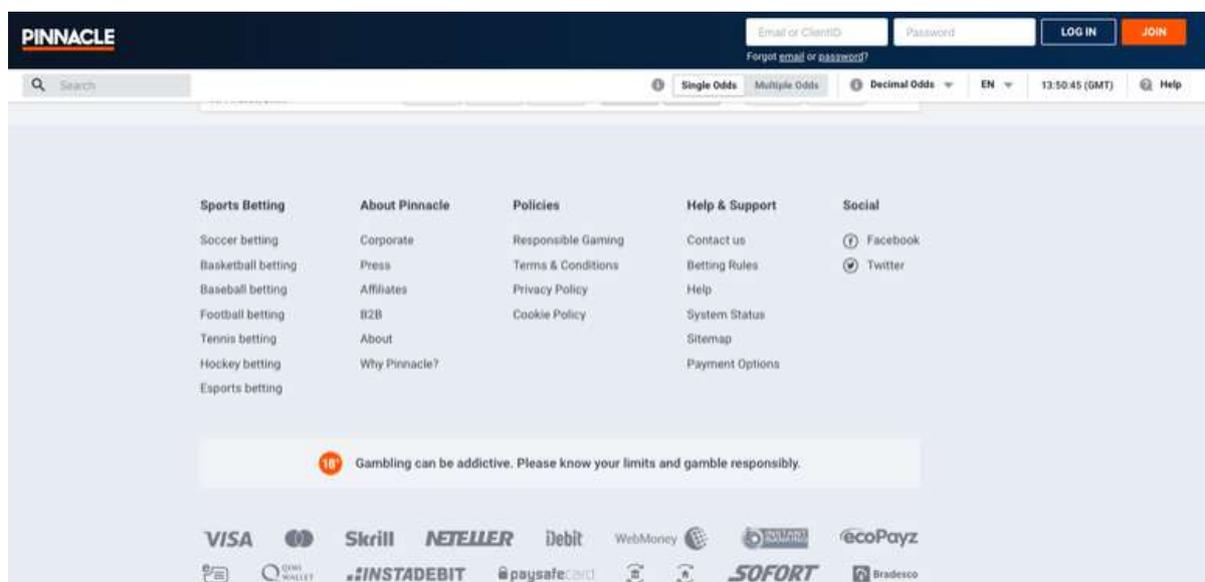

Social Gaming , Sports & Esports through to Casino and Trading

One of the main industries that has benefited a lot from the increase in popularity of eWallets has to be the iGaming industry. Online casinos and sportsbooks thrive off getting people to make quick deposits, otherwise, they could change their mind and go elsewhere. This is why you will find many of the top eWallets including ecoPayz, Neteller and Skrill at some of these sites.

Online casino sites typically advertise the fact that they offer eWallets as a payment method.

If you take a look at the footer of their website, you will usually find a list of the accepted payment methods. This makes things easier for players who want to decide whether they should use this particular site or not.

Below, you will find an example of a sportsbetting site (Pinnacle) that offers eWallet payments in the footer of their site these are sites you can trust and use your NETELLER or Skrill account.

Shopping

Over the years, e-commerce sites have also started accepting many eWallets such as Skrill as a method of payment. Skrill boasts their Skrill 1-tap mobile payments that can be used at marketplace and auction sites. This makes things a lot easier and convenience is something that a lot of customers who shop online are looking for these days. Skrill is leading the eWallets on offer with this new feature.

The e-commerce industry has grown a lot over recent years with many people opting to pay online rather than in store. This has led to an increase of e-commerce sites looking for a secure and quick payment option. eWallets are the solution that they have been looking for and this is something that these companies are banking on.

Send & Receive | Peer 2 Peer Payments

It is also worth noting that eWallets can also be used to send and receive money between family members and peers. So using all of these transactions can in fact help you earn loyalty points which converts into cash it also helps you when you go abroad or travel as you can pay or send money internationally for just a small fee. Save money on FX fees using the prepaid cards that are attached to the eWallet and all the time earn benefits, loyalty points and rewards.

The fees that Skrill charge for this is 1.9% which is reasonably low in comparison to other international money transfer methods. Despite the fees attached to doing international business or payment transactions – some eWallet options can still help you make a bonus on top if its used responsibly and within the terms and conditions of the promotions that are running each time you use them so it is definitely something worth considering.

A Comparison

Which one's right, for you?

With so many eWallets on offer these days, it can be hard to choose the right one for your personal or business use. Some offer lower fees while others offer better rewards. It is important that you have all of the information before making any kind of decision to ensure your money is in the right hands.

We believe that **Neteller**, **Skrill** and **ecoPayz** are the three best methods, because we've rigorously tested them read all the fine print and know how to use them to generate passive income - we thought we would show you some general points about each option in the table below.

These points are related to VIP accounts:

	EcoPayz	Neteller	Skrill
Two Factor Authentication	Two-Step Authentication	Two-Step Authentication	Two-Step Authentication
Available Account Currencies	45	28	38
Account Management Fees	Free	Free	Free
Annual Prepaid MasterCard Membership	Free	10 USD	10 USD
Receive Money	Free	Free	Free
Send Money (p2p)	Free	1.45%	1.45%
Bank Transfer	Free	2.5%**	1%**
Prepaid Card Delivery Time	5-10 business days	5-10 business days	7-10 business days
Prepaid card ATM Withdrawal Fees	2%	1.75%	1.75%

Signing up

Now that you know a bit more about what is involved in paying with an eWallet online and the different account types and fee options available, you might want to sign up to one now.

Pick the one you like from the comparisons above and then open your account. Once your account is open - make sure you join the **Wisepunters Community** on Facebook to hear about the latest offers and promotions to make money online.

We regularly post in this group to help you get the best out of all the available offers we scour week by week.

If you want to start earning an income doing arbitrage or matched betting get in touch with our community manager here to get the FAST TRACK learning and onboarding into our community program but now back to opening an account, the sign up process is as simple as possible, so as not to put people off.

They'll ask you a variety of questions including your personal details and they'll need a method of payment.

Sign ups to these kinds of accounts are usually done online so you will want to head directly to the site of your choice. Click on the links below for the best places to sign up:

[Neteller](#)

[Skrill](#)

[ecoPayz](#)

Sign up steps

Each site will vary in how it guides you through the sign up process but we thought we would focus on one site to give you a better idea of how this works. The eWallet provider that we have chosen here to demonstrate is Neteller so if you are thinking about using their eWallet services then you are in luck. The other brands will have a similar process the screenshots just differ so you can read this to get the basic outline then go choose the supplier you prefer and sign up.

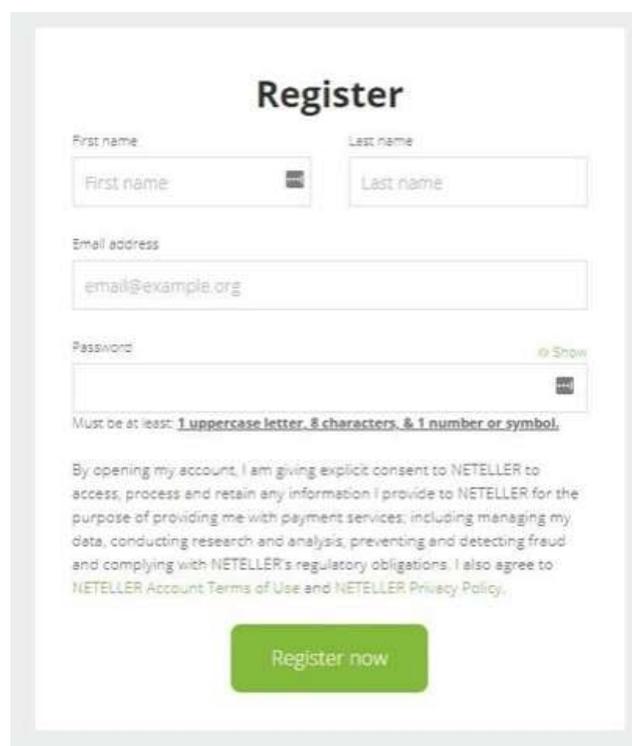

Here are some of the basic steps that you'll need to go through to get all set up:

1 Head to the [Neteller](#) site and choose the 'join for free' tab.

Enter your first name, last name, email address and password into the box. Make sure that you have access to this email address as you will need to confirm and this is what you will use to make payments. Your password should be secure as this will act as a barrier.

2

2

The screenshot shows a registration form titled "Register". It contains the following fields and elements:

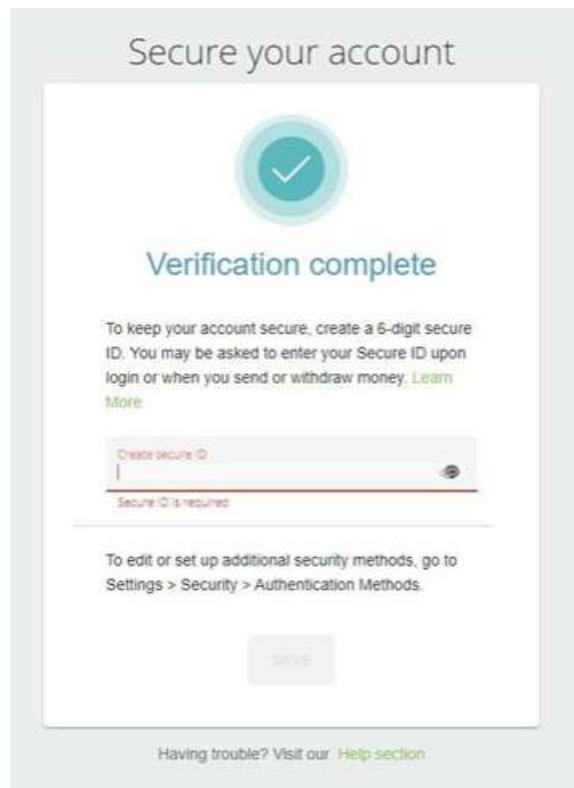

- First name:** A text input field with the placeholder "First name".
- Last name:** A text input field with the placeholder "Last name".
- Email address:** A text input field with the placeholder "email@example.org".
- Password:** A text input field with a "Show" toggle and a strength indicator.
- Password requirements:** A note stating "Must be at least: 1 uppercase letter, 8 characters, & 1 number or symbol".
- Consent text:** A paragraph stating: "By opening my account, I am giving explicit consent to NETELLER to access, process and retain any information I provide to NETELLER for the purpose of providing me with payment services; including managing my data, conducting research and analysis; preventing and detecting fraud and complying with NETELLER's regulatory obligations. I also agree to NETELLER Account Terms of Use and NETELLER Privacy Policy."
- Register now:** A green button at the bottom of the form.

3. Set your country and wallet currency. This might not sound important but this is not something that you can change once you have opened your account.

4. Enter your personal details such as your date of birth, address and mobile number. These are key details that will be used to identify your eligibility to make certain payments. We'll discuss this later on in the guide

5. Neteller will then confirm your identity using the mobile phone number provided. They send a six digit code to this number and you will need to enter it online.

6. Next, you will need to choose a secure ID that you will use to make payments. Choose something unique that cannot be guessed.

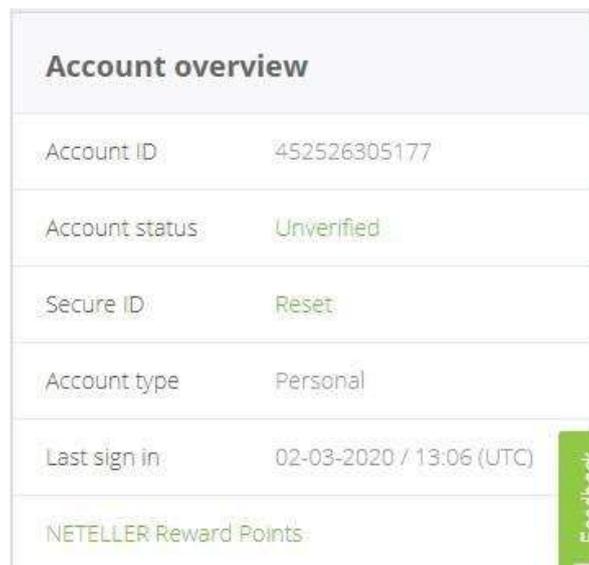

This should then take you to the dashboard where you'll be able to find out more about your account. Some of the key areas that you'll spot here include your VIP status, the funds currently in your account and your verification.

While the Neteller dashboard might not look the same as the dashboards that you'll find at Skrill and ecoPayz, you should be able to use our basic sign up steps to get started on your eWallet of choosing.

Verifying Your Account

One of the important things that you should know about using an eWallet is that you will need to go through various verification steps to use your account. While the two-factor identification in the sign up stage might seem like a way of verifying, it doesn't end here. If you have followed our Skrill sign up steps then you will notice that your account is 'unverified' according to your dashboard.

The screenshot shows a 'NETELLER Account overview' dashboard. The account status is 'Unverified'. Other details include Account ID: 452526305177, Secure ID: Reset, Account type: Personal, and Last sign in: 02-03-2020 / 13:06 (UTC). There is also a 'NETELLER Reward Points' section at the bottom. A green 'Feedback' button is visible on the right side of the dashboard.

Account overview	
Account ID	452526305177
Account status	Unverified
Secure ID	Reset
Account type	Personal
Last sign in	02-03-2020 / 13:06 (UTC)
NETELLER Reward Points	

This is something that you'll want to change before you try to make a payment. An unverified account will not be trusted and so you won't be able to progress entirely.

Verification cont...

eWallet accounts from the top providers out there right now must be verified. You might be wondering why this is the case as you have already entered your details and confirmed your phone number.

It is important to understand that eWallets are often used to pay for restricted items and make payments on restricted sites. For example, you might use your eWallet to make a deposit at an online casino which only accepts players aged 18 or older.

Certain sites have to follow regulations set out that fall under the KYC category. This stands for Know Your Customer and it involves understanding who a customer is before taking any money from them. In the gambling industry particularly, this is very important.

In the UK, the UK Gambling Commission will fine operators for neglecting to verify their customers. When they use eWallets to accept payments, they expect the information to be accurate and there are various e-money licence codes and regulations that the ewallet business needs to adhere to in knowing their customers just like a bank would follow.

It also means your money is kept safe online and protected at any time from theft or online fraud. This is why you will need to spend some time verifying your account before you can progress.

How to Verify

When it comes to verifying your eWallet account, there are a few ways that this can be done. One of the most popular ways to do this is to use your social media accounts that are already set up. At Neteller, they will give you the option to use your Facebook account. To do this, you will need to log in and they will use a third-party to verify that you are who you say you are.

If you don't have a Facebook account or you would rather not connect this to your account then you will be presented with other options. Over on the Neteller site, you can upload some photos of your identification to prove you are who you say you are.

If you decide to choose this option, you'll see a screen that looks like this. This details the different forms of identification that you can upload to verify your account.

The screenshot shows a web form titled "Upload Photos" with the instruction: "Please upload a document that shows your registered name and date of birth". Below this is a "Help" link. The form includes a dropdown menu for "Choose issuing country/region" with "United Kingdom" selected. Underneath is a "Select ID type" section with a note: "Use a valid government-issued photo ID or residence permit to add a valid identity card". Three radio button options are listed: "Passport", "Driver's license", and "Identity card". At the bottom of the form, there is a "Return to verification options" button. The footer of the form contains the text "© 2015 Neteller Group Limited" and "NETELLER" with a logo.

Once you have taken and uploaded the photograph of your ID, it will be sent off to be checked. You should receive a notification of your verification soon enough.

Protecting your documents

We should note that sites like Neteller, Skrill and ecoPayz will not use your details for anything that you have not already approved. They will verify your identity and then won't likely have a second glance at your documents.

If you decide to go with another eWallet solution, you might want to make sure that it is secure before sending over any documentation. These are your personal details and you need to protect your identity. The last thing you will want to do is send over the full details of your passport or your driving license to a company that is not going to protect it.

Once you have sent over the images, consider deleting these from your computer. This should help to ensure that no one else can gain access to these documents. Protecting your identity is very important so do not neglect your responsibility.

Deposits & Withdrawals

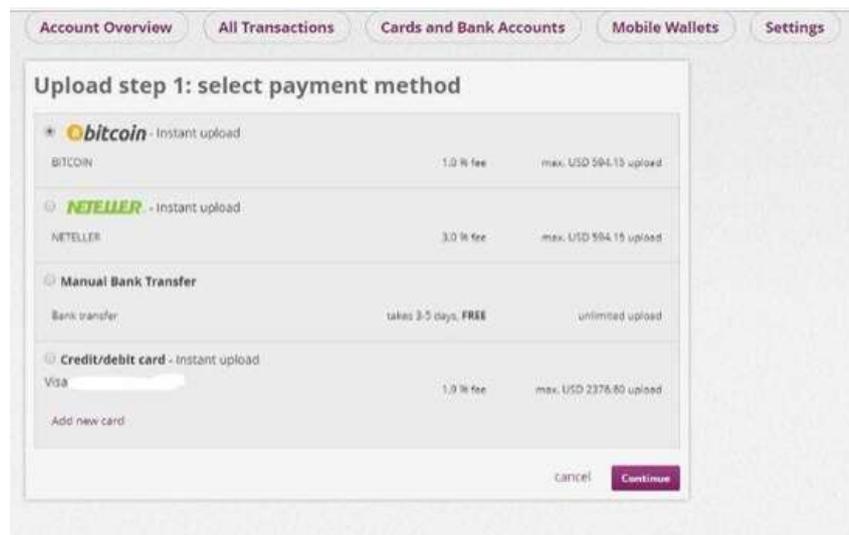

While the set-up process involved with eWallets might feel lengthy, once you are set-up, you will find that everything is much simpler to understand. Whether you are making a deposit or a withdrawal, you should be able to move money about with these options in no time at all.

As with everything, each method will follow different steps to deposit and withdraw cash. In this section, we will focus on deposits and withdrawals from your Skrill account. If this is the eWallet that you are choosing to use for online payments then you are in luck.

Making a deposit

When you are making a deposit into your Skrill account, you will need to choose between various options. Skrill, and many other eWallets, will accept bank deposits and credit/debit cards. At Skrill, you can also deposit with your bitcoin account and your Neteller account. It is important to note that unlike a bank, this kind of eWallet cannot accept payments in cash or by personal check.

To make a deposit to your Skrill account, you will simply need to click on the 'deposit' section of the site. You will be presented with this kind of screen:

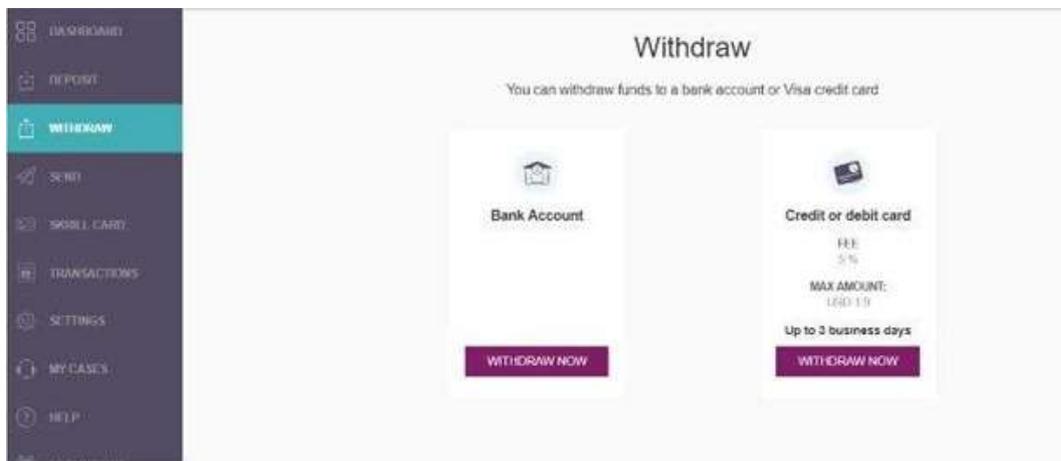

Here, you will be presented with some options and some further details. As you can see, with Bitcoin and Neteller deposits, there are fees attached. A manual bank transfer will take 3-5 days but this is free to use. You will be charged a 1.9% fee for using your credit or debit card on this.

Choose the option that is right for you and you should have the money in your Skrill account in no time. We would recommend using a bank transfer a few days in advance of when you will need to use the funds.

Always read the terms and conditions before making any kind of deposit. This will prevent you from having to pay high fees you were not expecting.

Making a withdrawal

The great news is that making a withdrawal from your eWallet account is usually just as easy as making a deposit. Usually, you will need to head to your dashboard and find the 'withdraw' tab. For Skrill users, it will look something like this:

The processing time will depend on the method that you choose to withdraw with and the eWallet that you choose. At Skrill, withdrawing to a bank account will work right away whilst withdrawing to a credit or debit card will take up to 3 business days. Check for withdrawal fees before taking any of these steps.

Prepaid Cards

Many eWallets offer a prepaid MasterCard to allow you to access your funds in real time and in the real world. Each prepaid card is different with some offering more advantages than others.

Neteller

The Neteller Mastercard is one that can be used at shops and ATMs around the world. The Net+ card has a lot of advantages. There is no cost at point of sale and ordering one in the first place will only cost you 10 USD. When it comes to withdrawing your money from an ATM, there is a limit of 1,000 USD per day. The great thing about this card is that it is available in the following currencies:

EUR / USD / GBP CAD /
SEK / DKK / AUD / JPY

Skrill

You might be interested in the Skrill prepaid MasterCard. This card will cost you 10 EUR to order and this includes the annual membership fee. If you ever need a pin reminder, a balance enquiry or a bank statement online, you can get all this for free. There are some purchasing limits with the Skrill prepaid card which is 2700 EUR per day. The Skrill card is available in the following currencies:

EURUSDGBP PLN

EcoPayz

The prepaid MasterCard for this company is named the ecoCard. This card is free to order and you can do lots of other things for free on it including checking your balance, checking an online statement and there are no fees at the point of sale. The ecoCard is valid for 4 years once you have ordered it and the delivery time is between 5-10 business days. The ecoCard is available in the following currencies:

EUR / USD / GBP

Becoming a VIP

At many of the top eWallet companies, it is possible to join the VIP scheme. At Neteller, Skrill and ecoPayz, the VIP schemes are very lucrative and can give you a boost in your account. At WisePunters we know how to maximise these VIP programs and help you earn money online.

We also help you attain VIP status faster so you can earn more cashback. If you want to find out how to do this contact us [HERE](#) for details on how to use the account and get a FAST TRACK upgrade.

So, what is on offer at these sites for VIPs?

Neteller

When you are a Neteller VIP, you will be able to save money on FX fees, receive higher limits on your transactions and increase your daily ATM withdrawal limit. Other advantages of becoming a VIP here include next day payouts, VIP chat and discounted withdrawals and deposits.

To become a VIP at Neteller, you will need to buy and sell Crypto, transact the minimum amount to merchants or use a VIP boost that will we will you about below.

The image shows the letters 'VIP' in a large, bold, gold-colored font. The letters are set against a dark, textured background that resembles a fingerprint or a similar pattern. The lighting is dramatic, with the gold letters standing out prominently against the dark, almost black background.

EcoPayz

At ecoPayz, VIPs can benefit from promotions that are run throughout the year. You will receive details of these by email and will always be notified when there is something new that you could be taking advantage of. The team at ecoPayz work closely with their partners to ensure VIPs are well looked after.

One of the best ways to boost your ecoPayz VIP status is to use a booster like ours.

Skrill

The VIP club at Skrill is very exclusive and offers a lot of benefits to those who are a part of it. This includes things like higher limits on transactions, both online and offline. They also offer 100% money back offers as well as 24/7 dedicated support. VIP members at Skrill will benefit from lower fees which is something that we know is very desirable.

There are four levels of VIP at Skrill and you will need to transact over 6000 EUR in a quarter to reach the lowest level which is bronze. If that seems like a lot to you then don't worry because we have a solution.

Earning your VIP status

Sometimes, reaching the goals set by some of these eWallets can be quite difficult. They require you to transact a lot of money which isn't something that works for everyone. This is why your VIP status can be boosted by companies like ourselves. Why should you have to miss out on all of the great rewards?

If you want to become a VIP then you are in luck because this is entirely possible. As long as you **verify your account through our site**, you should be able to progress through the stages in no time at all.

If you are using Skrill, you will want to utilise their new Knect system. To do this, you can head to their site and sign up.

Once you have signed up to Knect, you can head back to [our site](#) and contact us to upgrade your account.

There is no need to wait around when it comes to building your VIP status with your eWallet and there is no reason to miss out on getting these rewards.

Cash Back & Incentives

Some credit and debit card companies will offer cash back to those who use their services but these aren't always great. You also usually need to jump through hoops to really benefit from these and this is what can put plenty of people off.

With eWallets, you can get cashback that increases in value as you progress through the VIP levels. If you use our service, then you can receive a lot of cashback from Neteller.
